

install ros on ubuntu

- install vmware workstation

from this link <https://www.vmware.com/products/workstation-pro/workstation-pro-evaluation.html>

- then we install ubuntu iso

from this link <https://ubuntu.com/download/desktop/thank-you?version=22.04&architecture=amd64>

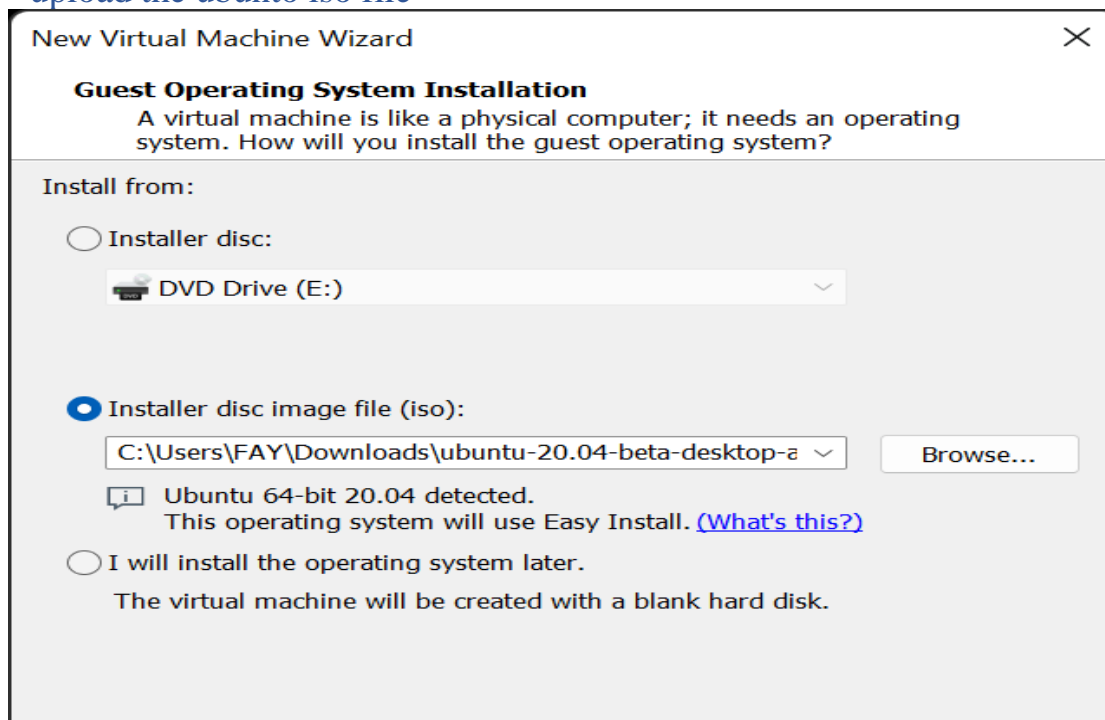

- then we open VMware ,
go to File > New Virtual Machine Wizard

- then select Type configuration ;

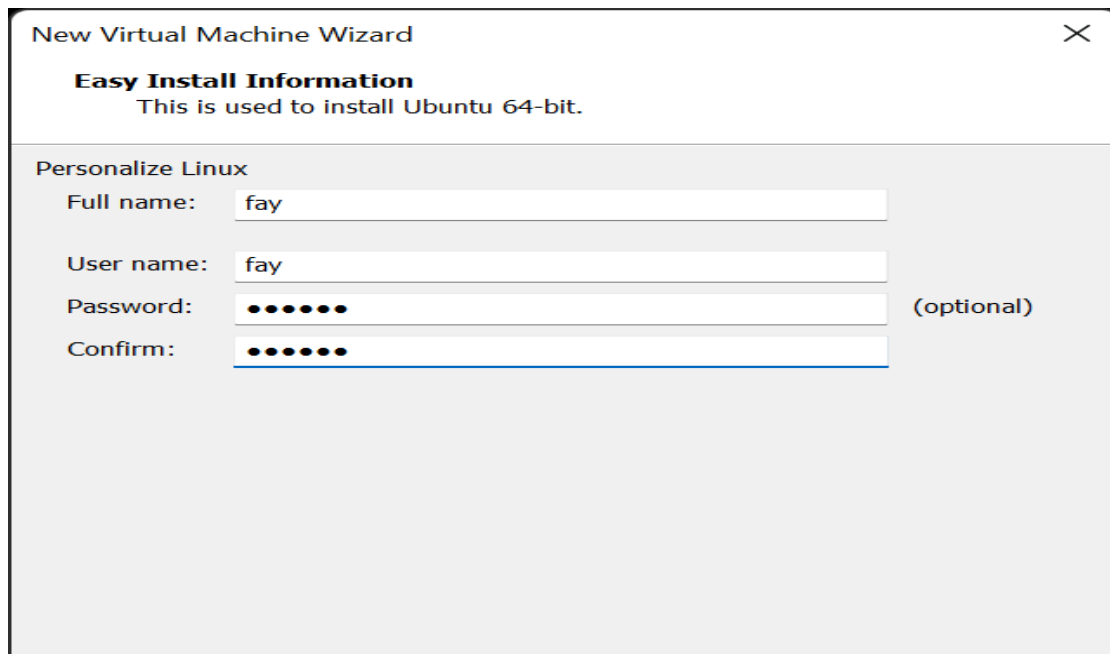

select installer disc image file (iso)

- upload the ubuntu iso file

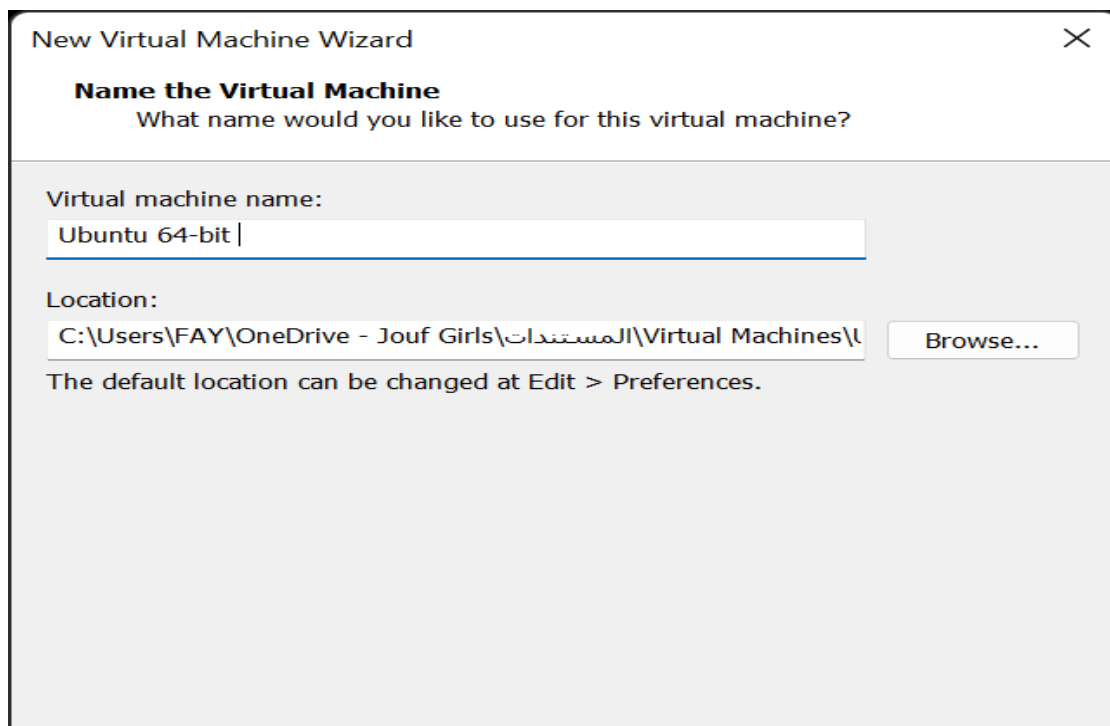

-then write Name and password

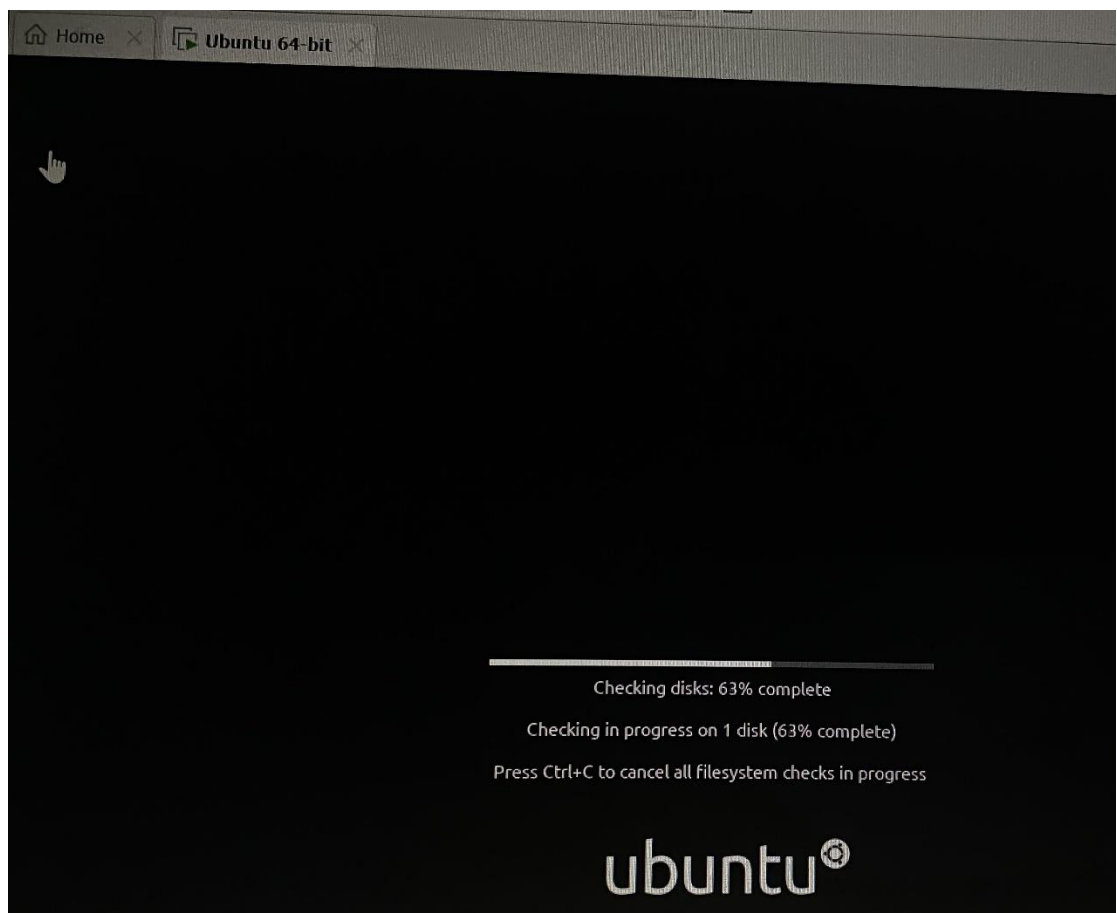

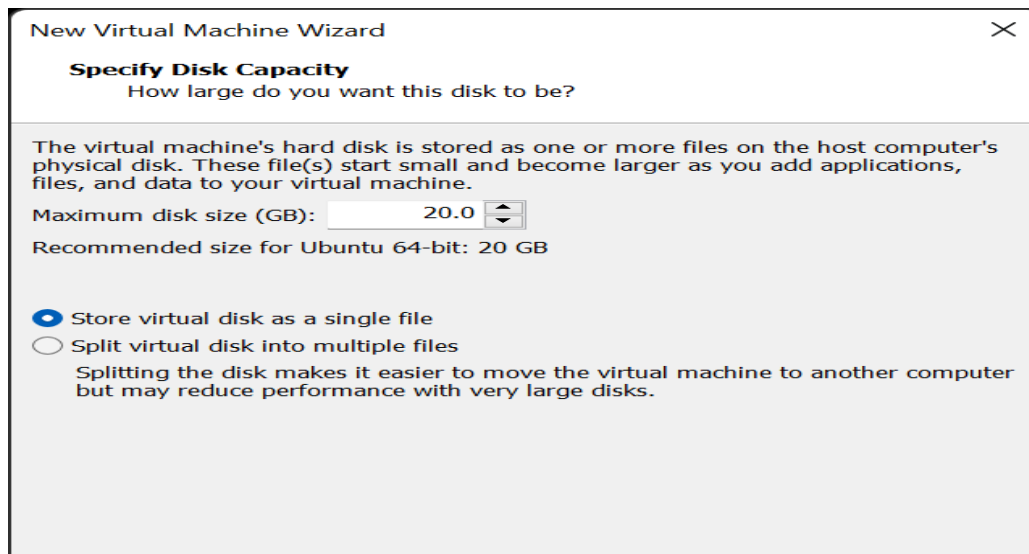

The screenshot shows the 'New Virtual Machine Wizard' window with the 'Easy Install Information' step selected. The window title is 'New Virtual Machine Wizard' with a close button (X) in the top right corner. Below the title bar, the text 'Easy Install Information' is displayed in bold, followed by 'This is used to install Ubuntu 64-bit.' The main content area is titled 'Personalize Linux' and contains four input fields: 'Full name:' with the value 'fay', 'User name:' with the value 'fay', 'Password:' with masked characters '••••••', and 'Confirm:' with masked characters '••••••'. To the right of the password and confirm fields, the text '(optional)' is displayed. The window has a light gray background and a dark gray border.

-and write the virtual name and change the file Location if you want

The screenshot shows the 'New Virtual Machine Wizard' window with the 'Name the Virtual Machine' step selected. The window title is 'New Virtual Machine Wizard' with a close button (X) in the top right corner. Below the title bar, the text 'Name the Virtual Machine' is displayed in bold, followed by 'What name would you like to use for this virtual machine?'. The main content area contains two input fields: 'Virtual machine name:' with the value 'Ubuntu 64-bit |' and 'Location:' with the value 'C:\Users\FAY\OneDrive - Jouf Girls\المستندات\Virtual Machines\'. To the right of the location field is a 'Browse...' button. Below the input fields, the text 'The default location can be changed at Edit > Preferences.' is displayed. The window has a light gray background and a dark gray border.

-then you can change the disk size by default it will be 20.0 .

-after setup Ubuntu , open terminal ,
and for we setup ros (by using this command on terminal)

```
sudo sh -c 'echo "deb http://packages.ros.org/ros/ubuntu $(lsb_release -sc) main" > /etc/apt/sources.list.d/ros-latest.list'
```

```
sudo apt install curl # if you haven't already installed curl curl -s  
https://raw.githubusercontent.com/ros/rosdistro/master/ros.asc | sudo apt-key add -
```

```
sudo apt-get update
```

```
sudo apt-get install ros-kinetic-desktop-full
```

```
echo "source /opt/ros/kinetic/setup.bash" >> ~/.bashrc source ~/.bashrc
```

-At the last we write roscore
